

HACKABILITY ASSESSMENT

SECURE YOUR PEOPLE TO
SECURE YOUR BUSINESS

HOW WOULD YOUR CYBER SECURITY STACK UP AGAINST A REAL WORLD ATTACK?

Attackers don't care about your strategy, how much security technology you have or how big your security team is, they simply follow the path of least resistance to hack you and achieve their objective – to steal your sensitive information and/or disrupt your business.

Penetration tests and other compliance based activities do little to prevent a real attack. At Enex Carbon we embrace a hacker's mindset and target your business to ensure you get a realistic assessment of your security posture.

Experience has shown us that the core of the problems, and fixes, will almost certainly centre on the behaviours of people within your business. Our focus will be on changing these behaviours to make your business more resilient to an attack.

WHY CHOOSE US

Our independent assessment of the security of your business can help you:

- Identify the key security exposures of your business before the real attackers do.
- Focus and prioritise your security resources and spending.
- Support the implementation of practical improvements to manage your security exposures.

HOW WE DO IT

Listen for the cyber security nightmare scenarios that keep your board and executives awake at night.

Apply any means necessary, logical, physical or social, to demonstrate how a real attacker could turn these nightmares into reality.

Focus on helping you to improve existing controls or implement new ones that block any paths of attack that have been uncovered.

ENGAGEMENT PROCESS

SIMPLE AND EFFECTIVE

STEP 1

PREPARE

Set the key objectives based on nightmare business scenarios emerging from discussions with your board/ executive management team.

Agree on the 'rules of engagement' for your assessment.

STEP 2

EXECUTE

Conduct the assessment against the agreed target objectives.

Analyse the attack to identify root causes and improvements required for any exposures.

STEP 3

DESIGN

Provide you with a detailed report including explanation of attack methods, security exposures and recommended management options.

After consultation, present an executive summary of the assessment's outcomes and practical recommendations to your board/executive management team.

STEP 4

REMEDiate

Engage with the teams responsible for the remediation actions.

Prioritise the short, medium and long term remediation actions into a roadmap.
